

Find Last Connected USB on your system

Find Last Connected USB on your system (USB Forensics)

- USBDevice is a small utility that lists all USB devices that currently connected to your computer, as well as all USB devices that you previously used.
- For each USB device, extended information is displayed: Device name/description, device type, serial number (for mass storage devices), the date/time that device was added, VendorID, ProductID, and more...
- USBDevice also allows you to uninstall USB devices that you previously used, disconnect USB devices that are currently connected to your computer, as well as to disable and enable USB devices.
- You can also use USBDevice on a remote computer, as long as you log in to that computer with admin user

Thus, the forensic tools executed successfully, and the evidence was captured and analyzed accurately
